

Team JSHD - Meeting 11/30/2021

- Went over requirements of Assignment 3.
 - Post mortem.
 - Project.
 - Description of features
 - Presentation.
- Agreed on dates to finish subtasks:
 - Update endpoint - Done.
 - Delete endpoint - Finish by 2nd.
 - Integration tests - Finish by 3rd.
- Agreed on time to finish presentation
 - Finish the weekend.
- Blameless Postmortem for Assignment 2
- What goals have been achieved.
 - Create db/schema and populate our downloaded guideline definitions
 - We should be able to read a list of all guidelines
 - We should be able to retrieve a specific guideline
 - We should be able to add a new guideline to the db
 - We should additionally verify the above functionality using manual testing with Postman
 - The product for milestone 2 achieved the acceptance criteria of all of the above.
- What goals have been missed, and by how much.
 - None.
- How plans were adjusted, in light of that information, including goals or features that were dropped.
 - Our plans did not change due to the achieved/missed goals.
 - We completed all of our goals in the milestone.
 - We obtained new information about updating (change the version of record) and deleting (do a soft delete only) from the database.
 - Didn't affect our plans, we just updated tasks/acceptance criteria to include these facts.
 - May need to update schema to implement these changes (ex. Adding a "deleted" property).
 - We should be able to get the activity definition referenced by a plan definition
 - Added a new goal to create this endpoint and unit tests.
 - Marked as a stretch goal, because the information could also be retrieved from existing "get plan" endpoint.

- Reviewed acceptance criteria with Alex, and found some acceptance criteria to be lacking.
 - Updated acceptance criteria to be more specific (ex. Specified number of corner cases to add).
