

## Team JSDH - Meeting 2021/09/30:

- Short introduction about:
  - Ourselves
  - Our concerns about course:
    - Course workload doesn't look too bad, but concerned about workload from other courses
    - Web dev experience.
  - Are we excited about the course?
- Talked about our tech stack.
  - Did we have backend testing?
    - Yes, we're thinking about using Jest.
- Talked about milestones.
- **Todo:** Discuss roles among members?
- Do we need CI/CD?
  - **Feedback:** Probably don't need it.
  - **Feedback:** Postman recommended by TA for manual testing.
    - Maybe make some scripts for this.
- Looked at our meeting notes.
  - **Feedback:** Looks good, well organized!
- Talked about our first deliverable.
  - Went over what we have so far, what we don't have.
    - Finished: Techstack + reasoning, broad milestones.
    - Didn't finish: Milestone subtasks and responsibilities, creating readme, implementing tech stack.
  - **Feedback:** We want to assign responsibilities for each task in milestones.
    - Especially for deliverables close by.
